A Subsidiary of James Fisher and Sons
Public Limited Company

July 2007

A busy few months for the JFIMS service team

Three new Rados RTM 860TS body monitors have been delivered, installed and commissioned by JFIMS at Hinkley Point A power station. The monitors are now part of the extensive list of installed radiation protection instrumentation (RPI) used at Hinkley Point A to support the regulatory requirement to ensure the safety of employees and the public.

Like all safety equipment, RPI needs to be regularly tested and maintained to ensure that it continues to function correctly. JFIMS have an experienced service team based at strategic locations around the UK who can take care of RPI through the lifecycle from installation, commissioning, first use testing, calibration, customer training, planned and breakdown maintenance, upgrades and repairs and finally removal and replacement. This team have now taken over the RPI maintenance work for Hinkley Point A.

Rob Watson, JFIMS Engineering and Services Manager commented “Hinkley Point A have a wide variety of monitors including body monitors, hand and foot monitors, free release and tool monitors. Many of the items have been supplied by Rados, but there is also equipment supplied by Thermo and other manufacturers. We have the experience and capability to maintain their full suite of instruments to ensure that they have a long and useful life. As well as RPI, we are also able to support the BIL LRGS drum monitor.

We have also taken over the maintenance of the full range of installed RPI at Bradwell power station”

At Trawsfynydd power station, work has been completed on a new canteen facility within the RCA. JFIMS staff were responsible for dismantling and removing two RTM 860TS body monitors from Capenhurst. These were then fully rebuilt and refurbished before being returned to service as the RPI on the entrance to the new facility.
